**Clean your ceiling space with the new
SUPER SUCKER**

Have a clean ceiling environment and be safe in the roof and in the house

REMOVE ALL
- Dirt
- Dust
- Old Insulation

What is the Super Sucker?

Essentially, it is a powerful, giant vacuum cleaner. It will suck out all loose insulation, dirt, dust and leaves from the ceiling of all domestic and commercial premises.

A powerful suction pump pulls materials through the industrial hose into the storage tank on our truck, ready for dumping. We can suck material up to 100 metres from the initial contaminated site.

Our unique multi-filtration system means that no dust is emitted into the environment, allowing other trades to safely work on the same site.

We process material down to 10 microns, allowing it to be safely used for all products except asbestos.

The Super Sucker will suck out wet or dry material, and can be used after water leakages occur in ceilings onto loose insulation.

If there are old batts in place, they can be safely removed before the ceiling is vacuumed clean of all residual particles. All material is removed through the roof, preventing any dust penetrating into the home.

Sucking out cellulose fibre

Degraded foam insulation

Who will benefit from this service?

By removing all dirt, dust, old insulation, rat droppings, etc, the benefits include:

For the Home owner

- * No dust filtering down through cracks in cornices
- * No poisons or contaminants left in ceiling space
- * Removal of lead dust from ceilings
- * No smells left to entice rats/mice/possums back to old nests
- * Removal of ant and insect infestations

- * Asthma sufferers will no longer have loose dirt and dust floating down on them
- * Healthier living environment for the household
- * Reduced fire risk from leaves and other flammable materials within the roof
- * Renovators can drop ceilings without being blanketed in fine dust
- * New insulation will be correctly installed, achieving a snug fit, resulting in a more comfortable and energy efficient home

For the builder/tradesperson

- * Safer work environment for all tradespeople
- * Better working conditions for installation of electrical and data cables, and air conditioning ductwork
- * Electricians will be able to rapidly find wires, reducing time spent in the ceiling

Removing Rockwool and batts
